                                                                                                                                                          clone pAt2301 containing DNA encoding gibberellin-20-oxidase may be used to construct chimeric genes and binary vectors to transform plants by usual methods, e.g. Agrobacterlum-mediated transfer.

Propagated transgenic plants show modulated growth and development e.g. reducing GA-20-oxidase expression with antisense constructs reduces vegetative growth in cereals and grasses, improving resistance to frost, etc. Sense constructs improve fruit set and growth, extended stems and leaves, induce flowering and overcome

```
species plant belonging to the species Populus tremula x. Fremulations exhibiting at least one improved growth parameter, in that a DNA sequence coding for expression of a polypeptide exhibiting plant hormone gibberlin (GA) 20-oxidase activity functionally inserted in the plant industries. The transgenic plant has increased growth rate, biomass production and/or xylem fiber length. The ectopic overexpression of GA 20-oxidase gene results in significant changes in growth rate, stem $20-oxidase gene results in significant changes in growth rate, stem growth influencing chemicals in forestry. The present sequence is Arabidopsis thaliana gibberellin (GA) 20-oxidase cDNA construct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a transgenic woody plant e.g. a Populus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New transgenic woody plant exhibiting improved growth parameter, useful in pulp and paper industries, comprises DNA sequence encoding gibberellin 20-oxidase activity functionally inserted in plant genome

                                                                                                                                                                                                                                                                                                                              þe
                                                                                                                                                                                                                                                                                                                    Clone pAT2353 containing DNA encoding gibberellin-20-oxidase may be used to construct chimeric genes and binary vectors to transform plants by usual methods, e.g. Agrobacterium-mediated transfer. Propagated transgenic plants show modulated growth and development e.g. reducing GA-20-oxidase expression with antisense constructs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         643 AAGACTATIGIGAAGCAATGAGTICTCTATCACTCAAGATCAGGAGCTICAGGGCTTAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vectors containing DNA encoding gibberellin-20-oxidase activity are used to construct chimeric genes and binary vectors to transform plants by usual methods, e.g. Agrobacterium-mediated transferm. Propagated transgemic plants show modulated growth and development e.g. reducing GA-20-oxidase expression with antisense constructs reduces vegetative growth in cereals and grasses, improval resistance to first, etc. Sense constructs improve fruit set and growth, extended stems and leaves, induce flowering and overcome dormancy, etc. Preferred transgemic plants are maize and wheat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GGCAGGTGGGGAAGGCGTGCGAGGCACGGCTTCTTCCTGGTGGTTAACCACGGCATCG

                                                                                                                                                                                                                                                                                                                                                             a chimeric expression construct expressing a RNA or protein which suppresses the gibberallin biosynthetic pathway sequence, divarts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a 2beta, 3beta-hydroxylase polynucleotides to achieve this. The method is used to control seed germination and seedling growth especially to requilate gene products of gibberallin biosynthetic pathway and restoration of normal seed germination, in transgenic plants. The plants produced are gibberallin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1167

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1707
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      regulating gibberellin activation e.g. to inhibit elongative to improve crop yield and management, applicable to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to nucleic acid molecules from Oryza sativa that encode proteins with gibberellin 3beta-hydroxylase activity. The protein, the genes that encode them and antisense DNAs are useful for regulating gibberellin activation, e.g. to inhibit elongative growth or to improve crop yield and management. They are useful for producing
                                                                                                                                                                                                                                                                       1587

new breeds of plants, for producing a higher harvest of feeding materia for animals and in plant regeneration. They are used to control the growth, size and shape of plants, e.g. dwarf plants, by inhibiting the gene, expression. The present sequence encodes a rice gibberellin 3beta-hydroxylase enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                                                1038

The present sequence represents the C-20 oxidase polynucleotide sequence is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels may be control of gibberellic acid levels. Gibberellic acid levels may be controlled by use of a chimeric expression construct expression and a Protein which suppresses the gibberellin construct chorythetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copally diphosphate synthase, Bata-hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a 2beta, 3beta-hydroxylase polynucleotides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants. The plants produced are gibberellin deficient, and have

The present sequence represent a gibberellic acid 2-oxidase 2 cDNA sequence, which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthesic pathway sequence, diverts to substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, and a 2beta, Beta-hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a 2beta, Beta-hydroxylase polyuucleotides to achieve this. The method is used to control seed germination and seedling growth especially to requilate gene products of gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants. The plants produced are gibberellin ceficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1274 GATGAGCCGCCTGTCGCTGGAGCTGATGGAGGTGCTCGGGGAGAGCCTGGGCATCGTCGG 1333

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acid molecules from Oryza sativa that encode proteins with gibberellin 3beta-hydroxylase activity. The protein, the genes that encode them and antisense DNAs are useful for regulating gibberellin activation, e.g. to inhibit elongative growth or to improve crop yield and management. They are useful for producing new breeds of plants, for producing a higher harvest of feeding materials for animals and in plant regeneration. They are used to control the growth, size and shape of plants, e.g. dwarf plants, by inhibiting the gene expression. The present sequence is genomic DNA encoding a gibberellin 3beta-hydroxylase enzyme.
                                                                                                                                                                                                                                                                                                    Rice, gibberellin 3beta-hydroxylase, growth inhibition, gene expression, crop yield, plant breeding; plant regeneration; growth control; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Rice-originated gibberellin 3approximatelyb-hydroxylase and encoded agenes for regulating gibberellin activation e.g. to inhibit elongative growth or to improve crop yield and management, applicable to produce new breeds of plants

                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                2,
                                                                                                                                                                                                                                                                      or to improve crop yield and management. They are useful for producing new breeds of plants, for producing a higher harvest of feeding materials for animals and in plant regeneration. They are used to control the growth, size and shape of plants, e.g. dwarf plants, by inhibiting the spene expression. The present sequence encodes a rice gibberellin 3beta-hydroxylase enzyme of the invention.
                                                                                Rice-originated gibberellin Sapproximatelyb-hydroxylase and encoded genes for regulating gibberellin activation e.g. to inhibit elongative growth or to improve crop yield and management, applicable to produce
                                                                                                                                                                                                  The invention relates to nucleic acid molecules from Oryza sativa that encode proteins with gibberellin 3beta-hydroxylase activity. The protein, the genes that encode them and antisense DNAs are useful for regulating gibberellin activation, e.g. to inhibit elongative growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1088

The invention provides a method for increasing the resistance of a core protein to proteolytic degradation that comprises linking or inserting onto a into the core protein a stabilising polypeptide of formula [(Glya)X(Glyb)X(Glyc)Z]n where Glya, Glyb, Glyc are 1-6 sequential Gly residues and X, Y, Z are Ala, Ser, Wal, Ile, Leu, Met, Phe, Pro or Thr and n can be anything between 1-66. X, Y and Z need no be identical from n repeat to n repeat. Alternatively a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          978
                                                                                                                                                                                        858
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New fusion proteins resistant to proteclytic degradation - comprising a core protein with a stabilising polypeptide comprising a peptide sequence containing glycine repeats
                                                                                                                                                                                                                                                                                                                919 GIGAACCGGGGGAGAGACGCCGGATCICCTTCCTCGGTCCGCCGGCCGACGTG

encoding the stabilising polypeptide can be linked onto or inserted into a nucleic acid encoding a core protein. The fusion proteins of the invention are more resistant to degradation by proteases and, thus, have a longer half-life than the unfused core protein. The products can be used for treating autoimmune diseases, cancer and inflammation. In particular, the core protein may be an IkappaB regulator protein for the treatment of inflammatory bowel disease, or a nitroeductase protein which can activate nitro drugs in eargue/prodrug therapy to treat cancer our other pathological conditions. The fusion proteins can also be used in diagnostic methods such as In vivo imaging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1111

```
The present sequence is that of DNA encoding the Epstein-Barx virus (EBNA) nuclear antigen protein 1 (EBNA), see AAY95856). EBNA1 is utilised in a novel method for obtaining a eukaryotic cell that is stably transfected with a least one episome. This method involves transfecting a eukaryotic cell with: (1) a first episome comprising an EBV origin of replication (oriP, see AAA5025), a gene encoding a first protein whose expression results in cell death and a selectable marker for eukaryotic cells; and (2) a second episome comprising an EBV oriP and a gene encoding a second protein, where comprising an EBV oriP and a gene encoding a second protein prohibits the occurrence of cell death resulting from expression of the first protein to produce doubly transfected cells which also express an antigen that promotes retention of the episomes by the cells. The doubly transfected cells are maintained under conditions in which the first and second proteins and the selectable marker is maintained. Under these conditions, only cells containing both episomes live. Preferably, EBNA1 is expressed from 1 of the episomes, and the protein of interest from the other episome. Either or both
                                                                                                                                                                                                                                                 Stably transfecting eukaryotic cells with at least one episome for the production of a desired protein in vitro and for gene therapy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1052 GAAGCAGCGGGCGCAGCGGCGCGGGGGAGAGCTGCGGCTACGCCAGCAGCTTCACGGG 1111

protein and expression vector operationally encoding a protein sultable for tethering the nucleic acid to the histome HI protein, where the rethering protein is LANA. The composition is useful in aiding the retention of the viral DNA in the host cell. The viral vector encodes a protein suitable for tethering DNA to Histome HI. Methods for screening for compounds which are agonistic or antagonistic for the tethering of viral proteins to histome HI and DNA binding sites are useful for developing the method of viral transfer. The composition has applications to gene therapy, including the treatment of multiple sclerosis. Parkinson's disease, Huntington disease and diabetes. The present sequence represents the nucleotide sequence of the Epstein-barr virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides a composition comprising nucleic acid, histone H1
                                                                                                                                                                                                                                                                                                                                                                                                                Histone H1; tethering protein; LANA; gene therapy; multiple sclerosis; Parkinson's disease; Huntington disease; diabetes; human herpesvirus 8; EBV; latency-associated nuclear antigen; LANA; EBNA1; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A composition for use in gene therapy comprises an expression vector that includes a nucleic acid sequence encoding a nucleic acid binding

Plants were grown in the greenhouse at the University of

Plants were grown in the greenhouse at the University of

Callfornia, Riverside (Fenton, SJ Close, TJ Close). Whole

spikes with awns trimmed were collected at 20 DaP (Fenton

). Total RNA was prepared, Poly(A) RNA was purified, one

primary unamplified cDNA library was made, and I million

pit were in vivo excised to give paluescript SK(-) cDNA

phagemids in the TJ Close lab at the University of

Callfornia, Riverside (Choi). Phagemids were plated and

picked at the Clemson University Genomics Institute (CUGI)

(Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA

preparations, DNA sequencing and sequence analysis were

performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates,

'Rambo, Main). The sequence has been trimmed to remove

vector sequence and contains a minimum of 100 bases of

phred value 20 or above. For more details on library

preparation and sequence analysis sec

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chours were surface sterilized then germinated under axenic conditions in the dark at room temperature on filter paper with water, nystatin and ecfotaxime in covered crystallization dishes. Five-day old seedlings were crystallization dishes. Five-day old seedlings were then harvested, total RNA was prepared, poly(4) RNA was purified, one primary unamplified cDNA library was made, and 600000 pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ Close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clements of University Genomics Institute (CGGI) (Begum, Palmer, Frisch, Akkins and Wing). Plasmid DNA preparations, DNA sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or

                                                              Plants were grown in the greenhouse at the University of California, Riverside (Fenton, SJ Clase, TW Close). Whole spikes with awas trimmed were collected at 5, 10, 15, 20, 30 and 45 DAP (Fenton). Fotal RNA was prepared from each pool, equal quantities of all six RNA pools were combined, poly(a) RNA was purified from the mixture, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give palbuescript SK(-) DNA phagemids (Chol)in the TJ Close lab at the University of California, Riverside. Phagemids were plated and picked at the Clamfornia, Riverside. Phagemids were plated and picked at the clemson University Genomics Institute (CUGI) (Psgum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, YY, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or accommence analysis seen

Seeds were surfaces sterilized then germinated under axenic conditions in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Five-day old seedling shoots were then harvested, total RNA was prepared, poly (A) RNA was purpared, poly (A) RNA was purified, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids. These steps were performed in the TJ close laboratory at the University of California, Riverside (Choi, Close, Fenton). Phagemids were plated and picked at the Clemon Divisity was made pricked at the Clemon Divisity of California, plane, Palmer, Filsch, Akkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were

                                                                                                                                                                                                                                    Plants were grown in the greenhouse at the University of California, Riverside (Fenton, SJ Close, TJ Close). Whole spikes with awns trimmed were collected at 5, 10, 15, 20, 30 and 45 DAP (Fenton). Total RNA was prepared from each pool, equal quantities of all six RNA pools were combined, poly(A) RNA was purified crom the mixture, one primary unamplified cond. Interest and a million pfu were in vivo excised to give pBluescript SK(-) CoNA phagemids (Choi)in the TJ Close lab at the University of California, Riverside. Phagemids were plated and picked at the clemson Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (M) My. Filsch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or
